Summary

1. This document details the algorithms applied to Higher Education Statistics Agency (HESA) student record, HESA alternative provider student record and Individualised Learner Record (ILR) data in order to determine a provider's higher education and further education student numbers. We will use this approach to assess applications for degree awarding powers and university title, calculate Office for Students registration fees, and determine whether a provider is required to participate in the Teaching Excellence and Student Outcomes Framework.
2. This will apply to degree awarding powers applications received on or after 1 April 2018, university title applications received on or after 1 April 2019, and applications for transfer from the further education to the higher education sector received on or after 1 August 2019.
3. This document is aimed at readers with in-depth knowledge of the data. Readers are advised to have a copy of the HESA student record coding manual, HESA alternative provider student record coding manual and ILR specification for the relevant year, and the Office of Qualifications and Examinations Regulation (Ofqual) Register Data Extract Specification to hand when using this document.
4. Some providers submit both a HESA data return and an ILR return. Student instances should not be returned in both collections, except in the case of higher apprenticeships. If a provider submits a HESA return it should return any records associated with higher apprenticeships to both HESA and the ILR. Therefore to avoid double counting these records, we have excluded from the population all records related to higher apprenticeships from the ILR for providers that submit HESA data.

Note on terminology

5. The algorithms below apply to three different data collections, each of which has a different structure. In the HESA student return, the fields that we use are associated with a student instance. In the HESA alternative provider student return, the fields that we are use are (mainly) associated with a student instance period; there may be many instance periods per student instance. In the ILR return, the fields that we use are associated with a course; a learner may study multiple courses.
6. Below, we use the generic term 'record' to refer to either an instance, an instance period or a learner-course combination, depending on the data source.
7. The year '20Y1-Y2' below refers to the academic year starting on 1 August 20Y1 and ending on 31 July 20Y2.
