

Appendix 2: Validation checks on HESF19 data

1. The HESF19 workbook contains a series of validation checks which help to ensure that incorrect data is not submitted. This appendix describes these validation checks.
2. Above Table 1 and 2 validation cells return '**Validation: OK**' if the data in the table has passed validation. If an error or inconsistency is detected in a table, '**Validation: Failure**' will appear in red above the column in which it is detected, and values associated with the validation failure will turn red. Below or to the right of the table, errors and inconsistencies will be described in more detail.
3. The 'Information' sheet in the HESF19 workbook contains more specific information as to where validation checks have been failed.
4. These errors **must be corrected** before the final submission of your HESF19 workbook. We will not accept workbooks containing validation failures. If an invalid workbook is uploaded to the portal, you will receive error messages, and your upload will not be accepted. However, a results package will be generated, which you may find useful for checking purposes. Please see Appendix 1 for further information regarding the portal and submitting your workbook.
